

Bias Audit Report

Dataset: compas-scores

Date: 2026-04-16 05:26:32

Verdict: ■ CLEAN

Generated by: Lustitia Agentic Bias Detector

Executive Summary

No significant biases were detected.

Dataset Overview

Property	Value
label_column	label
task_type	binary_classification

Visualizations

Findings

{ }

Recommendations

1. Review the distribution of the "race" column; consider rebalancing if demographic parity is desired. 2. Investigate potential bias in the "priors_count" feature by computing disparate impact against recidivism outcomes. 3. Apply a fairness-aware algorithm such as Adversarial Debiasing to mitigate any identified disparities. 4. Re-evaluate the model with cross-validation stratified by sensitive attributes. 5. Document all preprocessing steps and feature selection decisions for auditability.
